POLYON®
Controlled-Release Fertilizer

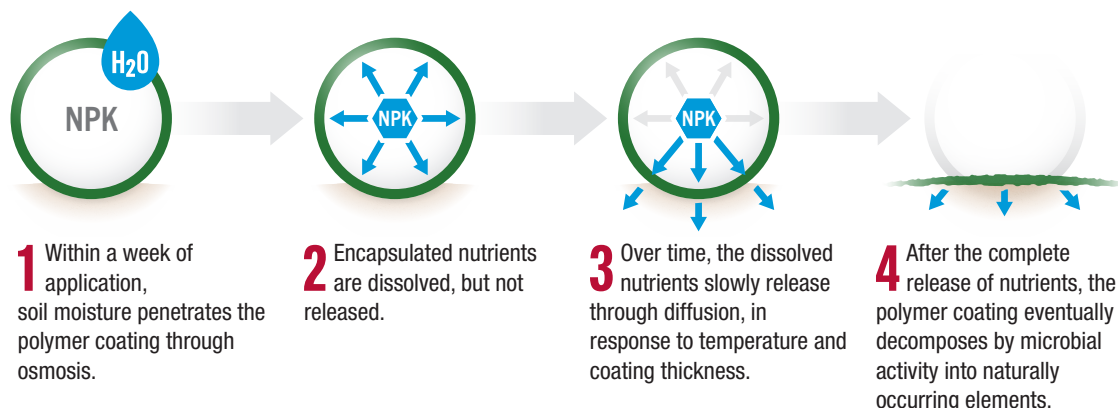

POLYON® controlled-release fertilizer with its trademarked green color is backed by years of research, and for decades has been the market leader in the turf and ornamental markets. The key to its performance is the Reactive Layers Coating Technology, which meters out nutrients via diffusion, regulated by soil temperature and coating thickness.

Product Benefits

Polygon® controlled-release fertilizer is formulated for turf, landscape and nursery applications.

- Temperature-driven nutrient release, not affected by excess moisture or rainfall
- Precise, predictable nutrition; minimal surge growth and low burn potential
- Fewer applications save time and offer the ability to reallocate labor resources to other tasks
- Dust-free handling and long shelf life due to durable coating
- Environmentally responsible with low potential for nutrient leaching, denitrification, runoff or volatilization

Polyon® in the Nursery/Greenhouse

Activation involves lowering the pH of the concentrate with phosphoric, hydrochloric or any other acid. Activation may be accomplished manually for low volume batch applications.

- Homogeneous NPK + Minors

- Homogeneous NPK

The uniform thickness of Polyon polymer coating over non-uniform substrate prevents catastrophic release.

Size:

20 kg/bag
